AutoCAD is a widely used CAD software. It is the best choice for drafting. It is a desktop CAD application that can run on a personal computer or on a workstation. It is used by architects, engineers, and other professionals working on industrial designs. AutoCAD is mainly used by architects, engineers, contractors, and construction site supervisors. It is the preferred choice of professionals who work on real-world projects. AutoCAD is a software that is typically used for 2D drafting, drafting design, creating floor plans, 3D modeling and animation, blueprinting, surveying and mapping, dimensional modeling, model-based drafting, product lifecycle management, and building information modeling. The size of the document and the complexity of the drawing determine the complexity of the product. AutoCAD supports several different file formats, including DXF, DWG, and DWF. Retinal ganglion cells (RGCs) are axotomized during a wide range of retinal and optic nerve disorders and, as a result, there is widespread neuronal death. RGC loss often leads to complete blindness, and the limited availability of donor tissue has led to the widespread use of fetal retinal tissue transplantation. However, allogeneic human fetal tissue is associated with considerable immunological and ethical concerns, and alternative strategies are needed. Human RGCs have been transplanted into the eye as an alternative to fetal tissue. Preclinical data suggest that transplantation of human RGCs into the eye of rodents can restore vision and is safe, providing proof of principle for this therapeutic approach. However, there are some hurdles that remain to be overcome before transplantation of human RGCs becomes a therapeutic option for humans with retinal degeneration. In the current review, we discuss the progress made in our understanding of the physiology and pathophysiology of RGCs and the experimental models used to establish a functional RGC circuit in vivo. We also summarize the advances made in the development of cellular therapies and discuss the advances that need to be made to translate retinal ganglion cell transplantation into clinical trials for the treatment of human disease.The same week that the U.S. Environmental Protection Agency issued its first report on the effects of fracking on drinking water, a British think tank released a report that said fracking across the U.K. could eliminate the need for 90 percent of Britain's energy sources by 2050. The report from the Carbon Tracker Initiative says that fracking could mean the world's use of coal, natural gas and other fossil fuels in the coming decades would decline from nearly 50 percent of global energy use today to a more modest 20 percent by 2050. That is, after all, a momentous change. The report is another indication of the breadth of oil and gas exploration that is now taking place on U.K. land, which has outpaced the U.S. in new wells that have been drilled over the last year. Most of that activity is taking place in the country's southeast and mid
